Post Operative Instructions

ABOUT THE CARE OF YOUR SCAR

All surgical procedures that involve any incisions in the skin will result in a scar.

Scar care should be initiated approximately 2 weeks after surgery provided that the incisions are completely closed and sealed.

Prior to initiating scar care, please check with Dr. Landsman or the nurse that it is ok to start, and consult with them on which product is best for you.

We recommend:

- BioCorneum plus SPF30 (available in our office)
- Topical Silicone Sheeting
